

RUDDUCK

ALPHA RAPID RODENTICIDE

EXCEPTIONALLY QUICK CONTROL OF MICE INFESTATIONS

35 g/kg ALPHACHLORALOSE

- ◇ Alpha Rapid is an ideal product to achieve quick control of mouse populations
- ◇ It is very fast acting anesthetic - mice become drowsy in 10 - 15 minutes and die from hypothermia soon after
- ◇ This means corpses are easily found and disposed of, rather than dying in hidden voids
- ◇ Very low dose - a wild mouse requires less than half a gram - a mere tooth scrape for a lethal dose
- ◇ It will control anticoagulant resistant mice
- ◇ The combination of fats in the paste baits increases palatability
- ◇ 95% control can be expected in temps of 10 - 16C degrees
- ◇ It is a perfect tool for IPM programs
- ◇ Used appropriately it will help reduce the amount of SGAR in the environment
- ◇ It has no known resistance
- ◇ It has no secondary poisoning risks
