

Rudduck has developed and now formulates and supplies a range of professional quality insecticides. We have successfully launched several niche and speciality technologies in Australia which are sourced globally. Rudduck is fast growing in its range and reach - our focus is on pest control and agriculture.

FASTRAC[®]

BLOX[™] Rodenticide

FASTRAC Blox are specifically formulated for livestock producers, especially swine and poultry facilities where rodent populations are high and biosecurity is critical. FASTRAC is excellent for knockdown of severe infestations because it's made with Bromethalin, an acute active ingredient that kills rats and mice faster than anticoagulant baits. FASTRAC's unique mode of action makes it a critical part of any bait rotation program, and should be used at least once per year to reduce any potential resistance issues to anticoagulant baits.

OUR FASTEST ACTING BAIT FOR TOUGH RODENT PROBLEMS

- Advanced formulation to deliver improved bait acceptance, higher melt point and an enhanced preservation system compared to our previous formula
- Each 4kg bucket of FASTRAC kills up to 408 rats and 1,632 mice*
- Each block kills up to 6 mice*
- Each 30g placement (2 blocks) kills up to 3 rats*
- Use in a rotational program for at least 2 months

FASTRAC Blox saves technicians time and money. Rodents can consume a lethal dose in a single night's feeding, reducing the amount of bait required to achieve control.

Due to an effective knockdown when compared to anticoagulants, more rodents may be controlled with less bait. FASTRAC Blox are also registered for use in and around buildings.

Mold and moisture resistant
Rodents love to gnaw on the multiple edges
Can be secured in a bait station

Bell scientists developed a method of synthesizing bromethalin that removes by products and impurities, yielding an effective and consistent product. This active ingredient, in combination with Bell's palatable formulation, gets results in rodent control.

The BLOX have multiple edges that appeal to a rodent's desire to gnaw and are made with high-quality ingredients and small amounts of paraffin for a palatable bait. Bell's proprietary All-Weather BLOX work well in any condition — wet or dry, indoors or out.

The 15g FASTRAC BLOX has a hole in the center which provides technicians the flexibility to place it on bait securing rods in bait stations, or nail or wire it in place.

FASTRAC is a premium bait for the toughest infestations. Fastrac has been formulated to deliver improved bait acceptance, a higher melt point and enhanced preservative system.
